LAB WORKS

S.No.	Name of Experiments	Date of Submission	Signature	Remarks
	<u>Lab1: HTML</u>			
1.	Display your name as plane text WEB Browser.			
2.	Display your name in WEB Browser declared inside the body			
3.	Write a complete source code to demonstrate the use of use html, head, title, body tag.			
4.	Write a source code to demonstrate whitespace collapsing.			
5.	Create two paragraphs. Paragraph 1 containing the heading as "Science Colleges in Nepal". Heading of Paragraph 2 must be smaller than the heading of Paragraph 1. Also show the use of b, I, sup, small, strong, abbr, acronym, blockquote with cite attribute, city, q tag inside the two paragraphs.			
6.	Write the HTML code to display the following output: Hi, My Name Is John			
7.	Write the HTML code to demonstrate: a. code b. kbd c. var d. samp			
8.	Write a HTML code to demonstrate the concept of: ○ Unordered list ○ Ordered list ○ Nested unordered list ○ Nested ordered list ○ Definition list			
9.	Write the HTML code to demonstrate image as list.			
10	Write the HTML code to demonstrate the use of URL along with Absolute URL, Relative URL.			
11	Write a HTML code to create the link.			
12	Write the HTML code to generate the following output with the use of anchor tag: Home About Gallery The Home is in parent directory, About is in sub directory of Home, and Gallery is in root			

	directory. Write the code for each and every tabs.			
13	Create a web page that demonstrate the use of destination anchor using name and id attributes.			
14	Add image using img tag.			
15	Create an image gallery of 9 images with 3 images in a row each having 200 width and height 250.			
16	Write a HTML code to map image as Client side and ServerSide.			
17	Write a HTML code to demonstrate how audio, video can be added to the web pages along with all the attributes.			
18	Write the HTML code to print the following output: SN Name College Address Email Phone First Name Last Name Fill at least 5 details.			
19	Write XHTML code to demonstrate the use of Nested table with rowspan and colspan attribute.			
20	Create a simple html page to demonstrate the basic structural tags of HTML.			
21	Prepare an HTML page to display the syntax and usage of any 10 text formatting tags.			
22	Create an html page to display your bio data using <pre> tag. (Do not use table)			
23	Create an html page to write brief description about your college using header tags, paragraph tag and text formatting tags.			
24	Create an image gallery of any three popular places in Nepal along with their short description with the images aligned in left or right.			
25	Demonstrate the use of align, vspace and hspace attribute using minimum of six images. (Make a gallery)			
26	Create a webpage to containing brief description about your college and links to your college and university website.			
27	Demonstrate the use of top to bottom and bottom to top link using anchor tags.			
28	Create the following list using html: 1. BSc.CSIT 2. MSc.CSIT a. Semester 1 • Subject 1 • Subject 2 • Subject 3			

	b. Semester 2 c. Semester 3 3. BSc.NT																							
29	Create the following list using html. A. Movies i. Nepali ii. Hindi iii. English B. Music C. Travel D. Reading E. Social Networking F. Chatting																							
30	Design the following single table using HTML: <table><tr><td>A</td><td>B</td><td>C</td><td>D</td></tr><tr><td colspan="3">E</td><td>F</td></tr><tr><td colspan="3"></td><td>G</td></tr><tr><td colspan="2">H</td><td>J</td><td>K</td></tr><tr><td colspan="2">L</td><td colspan="2">M</td></tr></table>	A	B	C	D	E			F				G	H		J	K	L		M				
A	B	C	D																					
E			F																					
			G																					
H		J	K																					
L		M																						
31	Design the following table using nested tables in HTML. Logo(image) ABC Company: Home(link) About Us(link) Contact Us(link) Content 1 News 1 Content 2 News 2 Copyright Facebook, Twitter(link) Powered by																							
32	Design an html form to demonstrate the 10 different types of generated using INPUT tag.																							
33	Design an html form to submit a job application form. Demonstrate use of drop-down list, text areas and file upload control.																							

	<u>LAB2: CSS</u>			
1.	Illustrate the use of background properties in CSS(for image).			
2.	Construct a web page with four paragraph and style using CSS.			
3.	Design a web page with six images and style them using external CSS.			
4.	Make a nested list using internal CSS.			
5.	Make a web page having 3 rows and 2 columns with all the hyperlinks and style it using external CSS.			

6.	Design an html form to demonstrate the 10 different types of controls generated using INPUT tag. Style the form as: • Set the background color of textbox yellow when it is focused. • Change the text color red if the input is invalid in textbox textarea. • Set green border to valid input. • Design the form using fieldset.							
7.	Design the given table and style as: <table><tr><td>Class A</td><td>Class B</td></tr><tr><td>Class C</td><td>Class D</td></tr></table> • Set the border of any style and color. • Set width background color for all classes. • Every text color should be different. • Display Class C and Class D in uppercase and remaining in lower case.	Class A	Class B	Class C	Class D			
Class A	Class B							
Class C	Class D							
8.	Design a horizontal menu of any five options and style as: • Set border for all links. • Set different background color and text color. • Change the font color and increase the font size when mouse over it. • Remove the underline from link. • Change all the default behavior of links.							
9.	Develop a web page with a paragraph and add some contents before the paragraph with red color and yellow background using CSS.							
10.	Illustrate the concept of pseudo elements with example. (::after, ::first-letter, ::selection, ::first-line)							
11.	Design following list using html and CSS: • Mouse • Keyboard • Monitor • Printer • Touchpad							

	<u>LAB3:JAVASCRIPT and XML</u>			
1.	Illustrate with examples the concept of alert, confirm and popup boxes.			
2.	WAP in javascript to demonstrate the objects, its properties and constructors with examples.			
3.	How many array can be created in javascript? Create 2-D array and display the array in HTML table.			
4.	Explain all the following built in objects with examples of each: ○ Array Methods ○ Date Methods ○ String Methods ○ Math Methods			
5.	WAP that contains a text field for name, age, phone number, email, dropdown for colleges, radio for gender and checkboxes for i accept all the terms, Perform the client side validations as: • All fields are required. • Name must contain alphabets and where spaces and of length greater than 6 characters long. • Age must be integer and must be between and 50. • Phone number must be exactly 10 digits long and must start with 98 or 97. • Email must be valid.			
6.	How events are handled in Javascript? Illustrate with examples.			
7.	WAP to show the concept of Try/Catch.			
8.	Write jQuery to show the concept of onClick. On mouse out, onkeyup, on form submit events.			
9.	Illustrate how jQuery effects(hide/show, fade, stop can be done in any image).			
10.	How animation is done using jQuery? Illustrate with example.			
11.	How json file is created? How can we parse the JSON file using JavaScript?			
12.	How AJAX is used to get the data from the server to the client side? Illustrate with example.			
13.	Create a simple XML element.			

14.	Create an XML document that confirms to the following DTD. <pre> <?xml version="1.0" encoding="UTF-8"?> <!ELEMENT Report (Students, Classes, Courses)> <!ELEMENT Students (Student*)> <!ELEMENT Classes (Class*)> <!ELEMENT Courses (Course*)> <!ELEMENT Student (Name, Status, CrsTaken*)> <!ELEMENT Name (First, Last)> <!ELEMENT First (#PCDATA)> <!ELEMENT Last (#PCDATA)> <!ELEMENT Status (#PCDATA)> <!ELEMENT CrsTaken (#PCDATA)> <!ELEMENT Class (Semester, ClassRoster)> <!ELEMENT Semester (#PCDATA)> <!ELEMENT ClassRoster (#PCDATA)> <!ELEMENT Course (#PCDATA)> <!ATTLIST Student StudId ID #REQUIRED> <!ATTLIST Course CrsCode ID #REQUIRED> <!ATTLIST CrsTaken CrsCode IDREF #REQUIRED> <!ATTLIST ClassRoster Members IDREFS #REQUIRED> </pre>			
15.	Create a XML document with simple and complex type.			
16.	How XSLT is used to transform the XML document? Illustrate with example.			

	<u>LAB4:PHP</u>			
1.	Write a simple PHP script that prints "Hello, PHP!" to the browser.			
2.	Declare variables of different data types (integer, float, string) and demonstrate the usage of constants in PHP.			
3.	Create a PHP program that uses if-else statements to check if a number is positive, negative, or zero. Utilize different operators for comparison.			
4.	Develop a function that calculates the average of an array of numbers. Test the function with various array.			

5.	Define a PHP class representing a "Book" with properties like title and author. Create objects of this class and display their attributes.			
6.	Design a simple HTML form with input fields. Create a PHP script that retrieves and displays the form data when submitted.			
7.	Enhance the previous form with PHP validation. Ensure that required fields are filled, and validate email address and make sure the phone number starts with 98 or 97 using regex.			
8.	Implement PHP code that responds to a button click event on a form. Display a message when the button is clicked.			
9.	Create a PHP script that sets a cookie with user preferences. Retrieve and display this information on subsequent visits.			
10.	Build a form with various elements (textboxes , checkboxes, radio buttons). Use PHP to access and display the selected values.			
11.	Develop a PHP script that reads content from a text file, modifies it, and then writes the updated content back to the file.
